Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/560,033

Applicant(s)

WAKAI ET AL.

Examiner

ERIK KASHNIKOV

Art Unit

1794

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 June 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-12 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 08 December 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-850)
- Paper No(s)/Mail Date 06/26/08
- 4) ☐ Interview Summary (PTO-413)
- Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 06/26/08 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. Therefore JP Documents 2001-162725, 2002-234115, and 2004-170468 have been stricken from the IDS and not considered.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thornton*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1 and 7 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 2 of copending Application No. 11/596,678. Although the conflicting claims are not identical, they are not patentably distinct from each other because while claim 1 does not teach an overcoat layer in light of the open language of the claim1, i.e. comprising, it is clear that claim 1 is open to the inclusion of additional layers, including an overcoat layer as required in 11/596,678. With regards to claim 7 the only difference is the range of linear low density polyethylene. The present claims require 45-5% whereas the copending claims claim 45-10%, which leaves a difference of 5% on the lower end of the scale, however it would have been obvious to one of ordinary skill in the art that the amount of linear low density polyethylene disclosed in the copending claim falls completely within the broad range presently claimed and thus one of ordinary skill in the art would have arrived at the present invention.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1 and 7 directed to an invention not patentably distinct from claim1 and 2 of commonly assigned 11/596,678. Specifically, although the conflicting claims are not identical they are not patentably distinct for the reasons set forth in paragraph 3 above.

5. The U.S. Patent and Trademark Office normally will not institute an interference between applications or a patent and an application of common ownership (see MPEP Chapter 2300). Commonly assigned 11/596,678, discussed above, would form the basis for a rejection of the noted claims under 35 U.S.C. 103(a) if the commonly

Art Unit: 1794

assigned case qualifies as prior art under 35 U.S.C. 102(e), (f) or (g) and the conflicting inventions were not commonly owned at the time the invention in this application was made. In order for the examiner to resolve this issue, the assignee can, under 35 U.S.C. 103(c) and 37 CFR 1.78(c), either show that the conflicting inventions were commonly owned at the time the invention in this application was made, or name the prior inventor of the conflicting subject matter.

A showing that the inventions were commonly owned at the time the invention in this application was made will preclude a rejection under 35 U.S.C. 103(a) based upon the commonly assigned case as a reference under 35 U.S.C. 102(f) or (g), or 35 U.S.C. 102(e) for applications pending on or after December 10, 2004.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 1 and 4-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishige et al. (US 2002/0155277) in view of Arjunan et al. (WO 98/44043).

8. Ishige et al. teach a multilayered stretched resin film with excellent printability that can be used as a label (paragraph 0001).

9. In regards to claims 1 and 7 Ishige et al. teach multi layer films with at least 2 different layers, Layer A, a base layer, which contains 40-90% a polyolefinic resin and

Art Unit: 1794

10-60% an organic filler (corresponding to applicants intermediate film layer), and layer B containing 0-85% a polyolefinic resin and 15-100% of an amorphous resin (corresponding to applicants front-back film layers). Ishige et al. also teach an optional surface layer, Layer C (paragraph 0019). In regards to layer A Ishige et al. teach that the polyolefinic resin maybe a polypropylene alpha olefin copolymer resin, and specifically an ethylene propylene random copolymer (paragraph 0023). Ishige et al. further teach that the organic filler can be cyclopolyolefins (paragraph 0027). In regards to layer B Ishige et al. teach that the polyolefinic resins for layer B follow the same limitations of the polyolefinic resin in layer A (paragraph 0034), which includes polyethylene with densities between 0.89-0.97g/cm³ which encompasses the range of linear low density polyethylene's (LLDPE). Ishige et al. further teach that the amorphous resin is typically exemplified as a cycloolefinic resin (paragraph 0036). Ishige et al. teach that typical film embodiments will have layers sequenced C/B/A/B (paragraph 0060).

10. In regards to claim 8 Ishige et al. teach that another layer sequence for their film can be C/B/A/B/C (paragraph 0079).

11. While Ishige et al. teach the composition and the layer sequence of the film they are silent about specifically using LLDPE.

12. Arjunan et al. teach LLDPE resins which are improved in their ability to be formed into a film layer (page 3 lines 19-20).

13. In regards to claim 1 and 7 Arjunan et al teach that LLDPE is desirable as a resin for films because of its relatively low cost compared to other resin types and its excellent mechanical, physical and chemical properties (page 2 lines 25-30).
14. In regards to claims 4 and 9 Arjunan et al. teach that the LLDPE can be one which is produced with metallocene based catalyst systems (page 6 lines 14-19).
15. In regards to claim 5 and the physical/mechanical properties of claim 1 while Ishige et al. and Arjunan et al. are silent regarding the properties claimed by applicant, Ishige et al. and Arjunan et al. teach all the materials and limitations of applicant and the physical properties are therefore considered inherent.
16. In regards to claims 6 and 10 Examiner points out that the claims will be treated as product by process claims (MPEP 2113) specifically the portion of the claim that is treated in this manner is "the label being heat shrunk onto the container body". Ishige et al. teach that the films of their invention are useful as labels (paragraph 0001). It is obvious to one of ordinary skill in the art at the time of the invention that labels are placed onto containers.
17. One of ordinary skill in the art at the time of the invention would be motivated to modify the films of Ishige et al. with that of Arjunan et al. because the films of Ishige et al. which offers improved drying properties and is excellent in printing property (paragraph 0009 and 0010), would benefit from the low cost and excellent mechanical/physical/chemical properties of Arjunan et al. (page 2 25-30).

Art Unit: 1794

18. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishige et al. (US 2002/0155277) in view of Arjunan et al. (WO 98/44043) in further view of Ikeda et al. (US 6,214,476).

19. As stated above Ishige et al. and Arjunan et al. teach multilayer films that can be used as labels, however they are silent regarding petroleum resins mixed with the random propylene copolymer.

20. Ikeda et al. teach film compositions with enhanced adhesion and gas barrier properties (column 1 lines 7-11).

21. In regards to claim 2 Ikeda et al. teach that petroleum resin acts as a tackifier when mixed in with polyolefin resins (column 6 lines 48-54).

22. One of ordinary skill in the art at the time of the invention would be motivated to modify the film of Ishige et al. and Arjunan et al. with those of Ikeda et al. because the films of Ikeda et al. because the multilayer films of Ishige et al. and Arjunan et al. which have excellent printing properties and low cost would benefit from the external appearance shrinkability and adhesion between layers of Ikeda et al (column 1 lines 7-16).

23. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishige et al. (US 2002/0155277) in view of Arjunan et al. (WO 98/44043) in further view of Tanaka et al (US 5,695,838).

Art Unit: 1794

24. As stated above Ishige et al. and Arjunan et al. teach multilayer films that can be used as labels, however they are silent regarding low crystalline alpha olefin copolymers.

25. Tanaka et al. teach adhesive polypropylene compositions and multilayer articles containing said composition (column 1 lines 8-10).

26. In regards to claim 3 Tanaka et al. teach that a polypropylene resin, including copolymers of polypropylene and other alpha olefin co-monomers is mixed with a modified polyolefin, which is preferably a low crystalline ethylene/alpha olefin copolymer base resin (column 2 lines 1-65).

27. One of ordinary skill in the art at the time of the invention would be motivated to modify the film of Ishige et al. and Arjunan et al. with those of Tanaka et al. because the films of Ikeda et al. because the multilayer films of Ishige et al. and Arjunan et al. which have excellent printing properties and low cost would benefit from the excellent adhering force in both the drawn and undrawn state of the films of Tanaka et al. (column 1 lines 45-47).

28. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishige et al. (US 2002/0155277) in view of Arjunan et al. (WO 98/44043) in further view of Hoffman (US 4,416,714).

29. As stated above Ishige et al. and Arjunan et al. teach a heat shrink film used as a label which comprises a cyclic polyolefin and LLDPE, however they are silent regarding forming a tube of the film before and attaching said tube of film as a label.

Art Unit: 1794

30. Hoffman teaches methods for attaching heat shrink labels (column 1 lines 15-20).
31. Hoffman teaches that a method for attaching heat shrink labels to containers consists of taking a film and forming a tube wherein the leading edge of the tube overlaps with the trailing edge of the tube, and then heat shrinking the label to the container (column 1 lines 58-64).
32. One of ordinary skill in the art at the time of the invention would be motivated to modify the invention of Ishige et al. and Arjunan et al. with that of Hoffman because the invention of Hoffman offers saves material and energy, and therefore saves money (column 6 lines 60-67).

Response to Arguments

33. Applicant's arguments, see arguments, filed 06/26/08, with respect to the previous objections of the IDS, specification and drawings have been fully considered and are persuasive. The previous objections of the IDS, specification and drawings have been withdrawn.
34. In response to Applicant's request that the Ikeda (US 6,214,476) reference be formally made of record Examiner has included the Ikeda reference in the 892 Notice of References Cited form being sent out with this Office Action.
35. In response to Applicant's arguments that ratio of the LLDPE is below 45% by mass, Examiner points out that Ishige et al. teach that the polyolefinic resin is present in amounts of 0-85% (paragraph 0019) Ishige et al. further teach that the polyolefin can be

a normal, as opposed to branched, polyethylene having a density of 0.89-0.97g/cm³, which is within the range of low density polyethylene. Therefore Ishige et al. teach an embodiment wherein a low density polyethylene is used in amounts below 45% by weight. Examiner also points out that while Applicant's argue that the amount of LLDPE is critical, there is no evidence, i.e. data, to support this position.

36. In response to Applicant's arguments that one of ordinary skill in the art would not have been motivated to combine the Ishige et al. reference with Arjunan et al. reference because the concentrations used in the Arjunan et al. reference are higher than that which Applicant is claiming. Examiner points out that while Arjunan et al. do not disclose all the features of the present claimed invention, Arjunan et al. is used as teaching reference, and therefore, it is not necessary for this secondary reference to contain all the features of the presently claimed invention, *In re Nievelt*, 482 F.2d 965, 179 USPQ 224, 226 (CCPA 1973), *In re Keller* 624 F.2d 413, 208 USPQ 871, 881 (CCPA 1981). Rather this reference teaches a certain concept, and in combination with the primary reference, discloses the presently claimed invention. If the secondary reference contained all the features of the present claimed invention, it would be identical to the present claimed invention, and there would be no need for secondary references. Examiner is using Arjunan et al. to show that a common normal polyethylene used as a component in a blend, such as the blend presented but Ishige et al., is LLDPE. One of ordinary skill in the art would be motivated to use LLDPE as a component in a blend because LLDPE has relatively low cost and excellent mechanical, chemical and physical properties (page 2 last paragraph).

Art Unit: 1794

37. In regards to Applicant's arguments regarding the desired clarity, Examiner first points out that there is nothing in the claims regarding clarity. However if the claims were amended to contain a statement regarding clarity, the claims would still be rejected under Ishige et al. in view of Arjunan. Since Ishige et al. and Arjunan et al. teach an embodiment of a blend of a cyclic polyolefin and a LLDPE wherein the LLDPE concentration is below within Applicant's range, then the film, being made of the same materials and within Applicant's ranges would inherently have the same properties.

38. In regards to Applicant's arguments that Ishige et al. do not teach heat shrinkable film or heat shrinkage and tear propagation as claimed, these properties are inherent due to the same structure and materials as those presently claimed.

39. Applicants argue, and the examiner agrees, that Ishige et al. in combination with Arjunan does not meet the requirements of newly added claims 11-12 that the label comprises a base film having an edge and another edge that overlaps as to form a tube where the edge and the another edge are attached in the overlap part. However, this is why Ishige et al. in combination with Arjunan is now further used in combination with Hoffman et al. which teaches label in the form of a tube as now claimed.

Conclusion

40. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 1794

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ERIK KASHNIKOW whose telephone number is (571)270-3475. The examiner can normally be reached on Monday-Friday 7:30-5:00PM EST (Second Friday off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Callie Shosho can be reached on (571) 272-1123. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
